

Feedback provided by: Minwei Shen, Jian Ying Kaiqiang Wang

Feedback was limited, we spent more time critiquing their project, and here is the summary:

They had questions about whether we would be planning to run statistical analysis with our visualization.

We do not believe it would be a function of our visualization to incorporate statistical analyses like regression lines.

They were concerned about the complexity of the filtering of our main charts. They suggested a tabbed set of filters, instead of the planned diffuse and shrunk when not on focused, expanded and zoomed when in focus. We were planning to use filtering with tabs for the personal information for figure 2). We may incorporate the filter tabs if the first filtering proves to be too challenging.
